International Harvester Oil and Gas Engines

EVERY wise farmer does what he can to save money, time, unneces-sary hard work, and to have as pleasant a

sary hard work, and to have as pleasant a life as is possible.

Therefore, wise farmers buy International Harvester engines, engines of standard construction with features like the offset cylinder head, accurately ground piston and rings, extra large valves, detachable valve guides, split-hub fly-wheels—features that make them last by far the longest and save the most money in the end.

He sure when you buy your engine that it is an I H C engine, and you will be sure of best material and best construction. They are made portable, stationary, or skidded; vertical or horizontal; air or water-cooled. Sizes range from 1 to 50-H. P. They operate on both low and high grade fuels.

Not every local dealer can show you International Harvester engines. Write us for interesting catalogues and full information, and we will tell you the name of the local dealer who handles our engines.

Fertilizer Backed by Their Reputation.

We are prepared to furnish through our representatives, Messrs. Henry Bright and Allen Hieatt, of the Danville Tobacco Warehouse Company, everyone in this section with our fertilizer, made especially for Burley Tobacco by the Virginia-Carolina Chemical Company, reliable business men, and the largest manufacturers of fertilizer in the world. Our fertilizer contains more potash than any other for the money, which is most needed for the tobacco crop, don't use a fertilizer that you know nothing about, as it may do your crop more harm than good. We refer to H. C. Curtis, State Chemist, who advised the mixture for Burley Tobacco, or to anyone who used it last season.

Mr. B. F. Scherffius, Tobacco Expert of the United States Department of Agriculture writes: "I tried your fertilizer on an acre of tobacco last year, securing an average yield of 1,640 pounds, which I consider fair taking into account that the tobacco was transplanted late, and the season was too dry for the fertilizer to get in full action. I am glad to state that I think well of your fertilizer, as it is about, in my opinion, the proper formula of Burley Tobacco."

J. W. Duncan, of Jessamine county made 1,900 pounds per acre which he sold at an average of \$17.

Mr. N. H. Witherspoon, a banker at Winchester used it on his tobacco crop, and got a fine yield, and good prices. Since then he and W. R. Spahr have bought twenty-two tons for their wheat crops.

W. R. Spahr, Cashier of Bank at Winchester, used it on 30 acres, mostly timothy sod, made 1,261 pounds to the acre, which sold for an average of \$15.25. He only used 200 pounds to the acre, drilling it in the row.

Z. C. Moore on 17 acres made 1,690 pounds and made an average of \$15.25. He used 200 pounds to the acre, part of it drilled in the row, and the other part beside the row after the crop was planted.

W. C. Wiggington, of Scott county, says he made 250 pounds more per acre where he used the fertilizer, and it stood the drouth much better than the other. Says it is the only fertilizer he would be willing to

recommended to his friends.

J. W. Montjoy, of Montgomery county, writes us: "I used 350 pounds to the acre broadcast, and raised a nice crop on very ordinary land. Have used several kinds, but yours is the best as it gives tobacco a nicer finish and better color than anything I have ever tried, and makes it ten days earlier.

King Todd, of Montgomery county averaged \$14, his neighbor just over the fence averaged \$8, and made made one-fourth less tobacco to the acre.

A buyer on the Mt. Sterling market says he could walk over the Warehouse floor and tell the crops that used our fertilizer by the color and texture of the tobacco.

W. S. Jones of Fayette county, says he used our fertilizer on his thinest land, and got more tobacco, and his average on 12,000 pounds was \$3.50 a hundred more than it was on the other part of the crop. You can phone Charles Gentry, or W. D Watta, of this county, or any one else that used it. We also refer to Clay & Kirkpatrick, of Mt. Sterling and G. W. Sandusky, of Keene, Ky., both of whom think it will pay to use this Fertilizer on any land.

Fertilizer on any land.

Mr. P. Sharkey, living near here, who tried several brands last year, in which he says: "I have tried your fertilizer, and it is all O. K. It will pay any man to use it, as it will add growth and color to the tobac-

We advise not to use a fertilizer with over 2 per cent of Ammonia, or over 5 per cent of Phosphate, as it will grow a coarse wild red crop. A targe part of the fertilizers being sold are doing more harm than good. We hear of some parties, who are selling fertilizer and expect to use ours on their tobacco crops and some of them claim that this fertilizers is the same as ours which it not true as we are the sole agents for the Virginia-Carolina Chemical Compony in the Burley Belt. We believe this to be the best formula for Burley tobacco or we would not sell it.

tobacco or we would not sell it.

We advice you to sow 40 or 50 pounds on your plant beds before sowing the seed. This should be worked into the ground or sow not over 20 pounds after the seed are sown, this is best put on just before or while it is raining.

MR. BRIGHT or MR. HIEATT

of the DANVILLE TOBACCO WAREHOUSE CO. They Can Supply You Immediately.
